

U1-D2 Homework – Substitution and Elimination**Name:**

Solve by elimination.

1.
$$\begin{array}{r} 3x + 5y = 24 \\ 7x - 10y = -74 \end{array}$$

2.
$$\begin{array}{r} 4x - 9y = 25 \\ 3x + 5y = 7 \end{array}$$

Solve by substitution.

3.
$$\begin{array}{r} 3x + 12y = 51 \\ 7x - y = 32 \end{array}$$

4.
$$\begin{array}{r} 17x - 6y = 2 \\ 8x + 2y = -28 \end{array}$$

Solve each equation. You'll need to *cross-multiply* on #7.

5. $3x + 7 = 5x - 23$

6. $-6(x - 3) = -48$

7. $\frac{x+1}{64} = \frac{x}{60}$

8. Solve by graphing.

$$y = \frac{1}{2}x + 3$$

$$y = 4x - 4$$

9. Find an equation in slope-intercept form for a line passing through $(4, -3)$ and $(-6, 2)$.

Simplify completely.

10. $n^7 \cdot n^4$

11. $\frac{t^{13}}{t^9}$

12. $-3x^2(x^3 - 5x^2 + 4x - 3)$
